#eEstonia digital government agenda 2030

OBJECTIVE	Best experience			
LEAPS	Switch to life-event based and proactive services	AI-powered government	Human-centric digital government	Green digital government
FOUNDATIONS	Management and user-centricity of public services	Data-driven governance and reuse of data	Futureproof digital government platforms	Centrally provided basic IT services
	Systematic experimentation with new ways	Open innovation and development of govtech community	Empowering digital change in public sector	Targeted international cooperation

Brief history of Estonian public sector IT: data viewpoint

up to early 2000s

- **development of systems**
- data created by digitisation of paper documents and processes

up to mid 2010s

- **delivery of e-services**
- data exists and is managed for the sole purpose of delivering services

from late 2010s

- **„data as an asset“ mindset**
- data has value also outside of initial systems and services

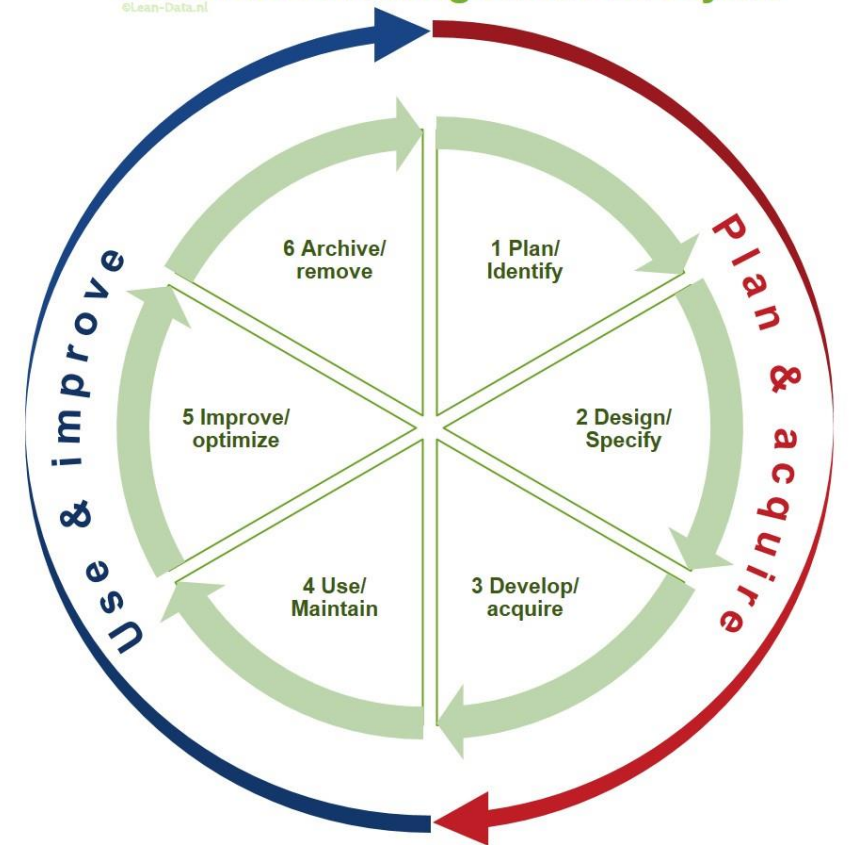

Data as an asset

„Asset“ as in something valuable

- + Clear definition of data value
- + Value-driven prioritisation of data governance activities

„Asset“ as in a product that we manage and offer

- + clearly defined steward
- + defined and delivered according to users' needs
- + constantly maintained and updated
- + offered together with relevant guidance, support and documentation

„Data as an asset“ mindset

Awareness, skills and
competencies

Human-centricity

Common rules and
guidelines

Hands-on support

Common tools

Legislation

Why is data important?

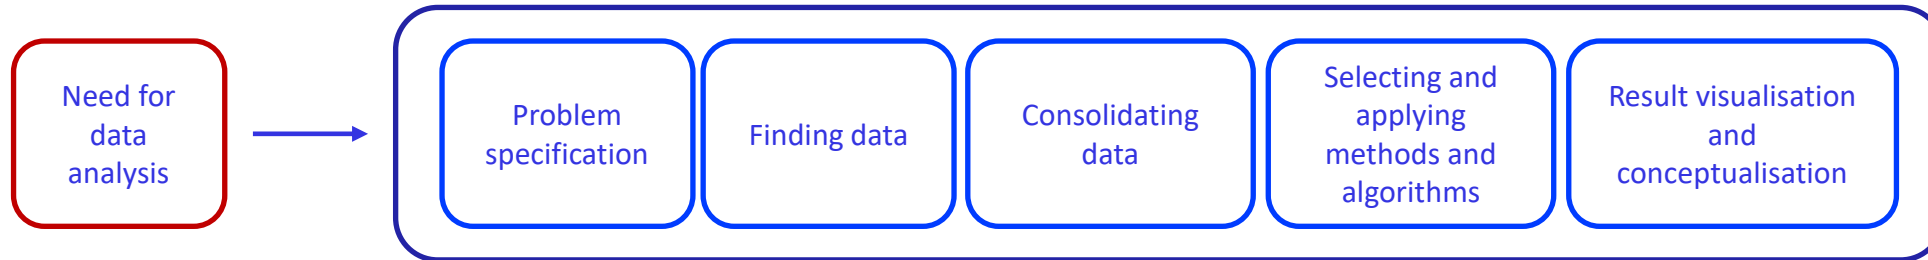

- European Union data economy at least **€829 billion by 2025**
- **Estonia has highest data economy in Europe** (10,5% GDP)
- €1.3 triljon in savings in manufacturing by 2027
- Saving of €120 billion a year in healthcare
- Over 500 million jobs will be replaced
- ...

AI-powered government focus areas

Area	Technology				Competences and skills	Legislation and ethics	Data as an enabler
	Bürokratt	Natural Language Technology	AI	Core components (BükStack)			
Objective	National virtual assistant based on artificial intelligence – an assistant in every area of life	Core reusable language technology components and language models - we ensure the sustainability of Estonian language technology	We help to reorganize the work of organizations with the help of artificial intelligence, supporting adoption through the AI support toolbox and central components	Reusable core components for service development - personal services and human empowerment	We ensure competencies and raise awareness of sustainable and reliable artificial intelligence development, implementation and procurement.	We regulate the human-centric and trustworthy development and use of artificial intelligence, ensure opportunities for issuing automatic administrative acts	We support institutions to disclose open data and ensure data reusability, improve the findability and use of data in a way that protects privacy, ensure efficient data governance and data quality

Reusable core components

● Developed ● In-development ● Planned

Bürokratt in a nutshell

Bürokratt is the vision of how digital public services should work in the age of artificial intelligence (AI)

All government services and information available from one place via virtual assistants:

- by voice
- in Estonian language (+ more)
- in any most common device and channel
- proactively
- open-source and free
- Personalized services (both public- and private sector)

Examples of projects from AI support toolbox

Snow AI

Measuring snow cover and snow layer thickness in weather stations using machine vision to save time and money and collect data on which to develop new forecasting models.

Environment Agency

Energy efficiency of buildings

Analysis and monitoring of energy consumption of city-owned buildings. The goal of the project is energy savings and input for management and investment decisions.

City of Tallinn

Bürokratt integration

Integrating the Bürokratt into the created self-service environment makes it possible to make the provision of user support faster and more efficient. Simpler appeals are handled by Bürokratt, more complex ones by a help desk employee.

Estonian IT Centre

Faster information retrieval

Creating institution's own "ChatGPT" trained on internal documents

Ministry of Foreign Affairs

Tartu vAlm

Increasing road safety, reducing the amount of man-hours, saving the environment and saving money. Streamlining supervision operations through faster resolution of appeals.

City of Tartu

Training object recognition through machine vision

Identifying objects from orthophotos using machine vision saves time and money and keeps map layers as up-to-date as possible.

Land Board

New ways of collaboration – Estonia as a testbed

The screenshot shows the Kaggle interface for a competition. On the left is a navigation sidebar with options like 'Create', 'Home', 'Competitions', 'Datasets', 'Code', 'Discussions', 'Learn', and 'More'. The main content area features a competition banner for 'Drinking Water Quality Prediction' with a water tap illustration. The banner includes the text 'Invent a predictive water quality model and automate the work of water inspectors.' and '28 teams · 8 days to go'. Below the banner are navigation tabs for 'Overview', 'Data', 'Code', 'Discussion', 'Leaderboard', and 'Rules'. The 'Leaderboard' tab is active, showing a search bar, 'Public' and 'Private' filters, and a table of top teams. A disclaimer states that the current leaderboard is based on 50% of test data. The table lists two teams: 'KristjanRoosild' with a score of 0.98936 and 'maverick_ss_26' with a score of 0.93617.

Data tracker

The Personal Data Usage Monitor allows you to see when your personal data is processed in the state's databases. The Personal Data Usage Monitor shows both operations within the databases and situations where a third party is granted access to your personal data. To see an overview, please choose the database you wish to see from the drop-down menu.

NB! If there is a company registry code instead of a company name in the 'Query performed by' column, then in order to find out the company name, please make a query with the registry code at the [e-Business Register](#)
